

Security Measures You Can Count On

As a business associate under the Health Insurance Portability and Accountability Act (HIPAA), data protection and privacy are of utmost importance to AdminaHealth®. We put clients and partners first, striving to be at the forefront in mitigating cybersecurity risk.

AdminaHealth operates on a SaaS platform that was built featuring a cutting-edge security-by-design methodology. Adhering to the most stringent security standards, the platform is regularly tested and updated to keep your data safe.

With costly increases in cyber fraud and data breaches within the industry, we made a strategic business decision early on to implement a scalable security model utilizing the HITRUST CSF for HIPAA compliance. This highly regarded accreditation demonstrates our compliance with federal and state regulations, and adherence to security controls to safeguard data and mitigate risk.

AdminaHealth has adopted the NIST Cybersecurity Framework illustrating our commitment to our partners and clients by ensuring the AdminaHealth Billing Suite meets essential security requirements within the industry.

With powerful automation, the AdminaHealth Billing Suite saves hundreds of man-hours each billing period. The question of risk-reward is no longer valid.

The Risk of Doing Business Overseas

Many businesses today rely on overseas workers as it seems cost-effective due to the lower cost of labor. When it comes to protecting client HIPAA data, the rules of HIPAA and HITECH fail to address the international aspect leaving no specific regulatory requirements but also no protections. Many expect HIPAA and HITECH changes to regulations soon. What protections do you have in place? Are you prepared for the legal ramifications?
